SC4 Araucanians SC4
Argentina

two poles were laid parallel to each other. Holes were then burned vertically through each pole and through the tree trunk below it, and wooden pegs pounded into the holes. If rapids had to be contended with, a third pole was usually pegged in the same manner across the middle of the raft. Rowing was done by two or three men, each using a paddle-like paddle known as lawewe. Before setting out in a dugout or on a raft, a prayer was said for a safe landing.

Today, transportation on land is on foot, on horseback (pl. 77, *a*), and in carts; on lakes, in flat-bottomed boats and commercial steamboats. During the present study, cattle and sheep were transported on the hoof, and sheep also on horseback with a rider. Firewood was hauled on carts. Vegetables were carried in baskets and sacks. The wilal, a carrying bag used by Chilean Araucanians, was not known in Argentina—informants examined one with interest and curiosity. Formerly luggage was transported in sacks of hide, and in saddlebags, on horseback.

HUNTING, TRAPPING, FISHING

Wild animals hunted for food were the guanaco; puma (puji or trapial); the wild boar or jabalí (kitrekütre); the Patagonian hare (mara); the huemul (dhumun); the pudú, a Patagonian deer (trull or pildu or *pofo*); and the armadillo (kofür). Since Spanish days, the European deer and European rabbit have been added to these.

Although all the above-named animals are still extant in the Araucanian country, they are only occasionally used as food. Pumas today are killed primarily because of their raids upon sheepfolds or flocks. When one is killed, however, its meat is eaten.

Wildfowl hunted for food were the rhea, spoken of as the ostrich (dhuñe); ñirgo or landurria (ruki); the avutarda; obne blanco or goose; gallaretta (pollulla or, popularly, pildil); flamingo (pitri); martineta or perdiz grande (*fudu*).

Implements used in hunting were the bolas-dore (Tehui), the bola perdida, lance, and spear. The bow and arrow were not known to have been used, but arrowheads and spearheads are found throughout the country once occupied by the Araucanians. Kolaglán, as a child, had searched for flint from which men made spearheads. Dogs generally assisted in all types of hunting.

A bolas-dore—a lariat thrown to twist about an animal's legs—consisted of either two or three balls of pumice lava covered with tough horsehide and fastened together with thongs. Today balls are often made by filling ball-shaped horsehide containers with pebbles or crushed stone. In the 3-balled one (pl. 76, *d*), a ball was fastened to
